## Investment Objectives

The Fund's objective is to offer participants to a diversified portfolio of financial instruments seeking to maximize their return through flexible management. The Fund intends to provide a level of return of 2.5% against money market instruments, in sequential periods of 3 years. The Fund will seek diversification in terms of financial investments in which it can invest in order to ensure an appropriate distribution of risks.

## Investor Profile

The Fund is intended for non-professional investors, professionals and eligible counterparties, with a moderate risk profile, who seek to make an investment with a view to obtaining a capital appreciation in the medium and long term, subject to equity fluctuations consistent with the nature of the assets that integrate it. The invested capital may be redeemed for a different amount than the capital initially subscribed.

## Manager comments

April was a very volatile month, marked by a very negative start, with great risk aversion after the announcement of the "reciprocal" tariffs, but followed by some recovery, with the 90-day delay of the application of these tariffs, except for China, for bilateral negotiations and a softening of rhetoric with China. The ECB once again cut interest rates by 0.25%, while regarding economic indicators we should highlight the 0.3% contraction in US GDP in the 1st quarter, impacted by a very significant increase in imports. In the Eurozone, GDP grew by 0.4%, while in China it grew by 1.2%. During the month, the 10-year interest rate in Germany fell 0.29% to 2.44%, while in the US it fell 0.04% to 4.16%. Credit spreads widened and stock markets fell.

### What helped the Fund:

Government and corporate debt, and alternatives

### What harmed the Fund:

Equity

### Perspectives for the Fund:

Volatility is likely to continue, with the most pressing issue being how much tariffs can actually fall and what the economic damage will be. Another issue that should have an impact is the tax cuts to be announced in the US, as well as the fiscal stimulus in China. Although the likelihood of recession in the US has increased, fiscal and monetary support at the global level should make it possible to avoid this scenario, bringing some normality to the markets.

The published returns represent past data, and do not constitute a guarantee of future profitability. The reference periods considered are the last quotation date and the quotation on the same date in the previous 12 months, 3 and 5 years. Annualized returns would only be obtained if the investment was made and maintained throughout the reference period. For the purpose of calculating returns, redemption fees are not taken into account, when applicable, and are net of all other fees. The value of the units may increase or decrease depending on the level of risk that varies between 1 (minimum risk) and 7 (maximum risk).

Note: Since January 1st, 2023, with the implementation of the PRIIPS Regulation, the Summary Risk Indicator (SRI) replaced the Summary Risk and Remuneration Indicator (SRI) as the Funds' risk indicator.
